The New York State Structural Masonry Coalition (NYSSMC) is an alliance of masonry organizations working together to encourage the use of structural masonry by providing resources and design support to the engineering community in The Empire State. The Coalition is founded on the belief that one system – masonry – provides the engineer tremendous design flexibility; that structural masonry is a key component to sustainable design; and that the economy of materials realized by the use of structural masonry results in significant cost savings.

The Coalition seeks to be a resource to New York's engineering community by providing design assistance, technical service, and in some cases project-specific consultation and hands-on training in masonry engineering software. Our collective goal is to help New York engineers design buildings that are innovative, meet current code requirements and design objectives while taking full advantage of the efficiencies of structural masonry.
